3.13.1 Granting international protection: Recognition rates at first instance

3.13.1. Granting international protection: Recognition rates at first instance

Icon for recognition rates at first instance

The recognition rate refers to the number of positive outcomes as a percentage of the total number of decisions on applications for international protection. For reporting in the Asylum Report, positive decisions calculated in the recognition rate include EU-harmonised statuses only (i.e. refugee and subsidiary protection). At times, the recognition rate which includes national forms of protection may be presented for countries where there is a considerable difference with the recognition rate of EU-harmonised statuses.[xxxiv](#)

The recognition rate for specific nationalities of applicants can indicate which citizenships are granted protection more or less frequently.

In 2023, the recognition rate at first instance for EU-regulated forms of protection climbed to 43%, increasing for the third year in a row (see *Figure 17*). This was the highest rate since 2016 (when 57% of decisions granted refugee status or subsidiary protection). The rise was mostly driven by increased recognition rates for Afghans, Iraqis, Palestinians and Ukrainians and by more decisions issued to Syrians.

Note: Data were not available for Portugal for October-December 2023.

Source: EUAA EPS data as of 1 February 2024.

Of the 294,000 positive decisions issued in 2023, 134,000 granted subsidiary protection, representing 46% of total positive decisions. This was an increase by 4 percentage points compared to 2022 and by 14 points compared to 2020. It was also the most ever in relative

terms since at least 2014. Over one-quarter of negative decisions for EU-regulated types of protection granted some form of national protection instead. Almost all of these decisions were issued in Spain and Germany.
