5.6.3. Assessing the age of a child applicant

5.6.3. Assessing the age of a child applicant

icon presenting assessing the age of a child applicant

In 2021, the EUAA updated and published its findings on age assessment practices in EU+ countries.[1428](#) Complementing a child-friendly animation which was released in 2020,[1429](#) the agency published a booklet for children arriving to Europe which explains what the age assessment process is.[1430](#) AWAS in Malta has updated the age assessment procedure and the age assessment tool with the support of the EUAA, according to the Agency's guidelines.

An advisory council was established in Belgium, chaired by the Catholic University of Leuven and the University of Ghent, to improve and standardise age assessment processes, ensuring that all hospitals carry out the examinations in the same manner. Authorities continued to be faced with a high number of applicants claiming to be minors: in 2021, 69% of self-proclaimed minors were found to be adults.

The Croatian Ministry of the Interior clarified the procedural steps for an age assessment in collaboration with medical institutions. However, no age assessment has so far taken place based on the new rules in 2021, as self-proclaimed minor applicants had absconded before the process could be initiated.

In Slovenia, authorities can request an age assessment already when an asylum application is made, instead of when it is lodged. These amendments were introduced to ensure that children can have access earlier to tailor-made reception and support, and authorities can start arranging procedural guarantees.[1431](#)

In Cyprus, the Administrative Court for International Protection raised issue with the age assessment procedure and the role of Social Welfare Services as the guardian of unaccompanied children.[1432](#) Based on the judgment, national authorities started to revise relevant roles and procedures.

Finnish authorities purchased a new, more reliable software which automatically calculates an applicant's presumed age based on an X-ray of the wrist. Discussions were also underway in France to revise the methods for an age assessment, in particular related to bone age assessments.

Principles of the age assessment procedure were clarified with the Organic Law 8/2021 in Spain. The law underlines that when the age of majority cannot be established, the person must be considered a minor pending the results of the age determination. Medical tests require the child's prior informed consent, and they must be carried out respecting the child's dignity and without risking the child's health. Medical tests which are invasive, require the child to be completely naked or genital examinations can no longer be done.[1433](#)

Amnesty International welcomed these changes and urged for additional measures to accelerate the age assessment process, noting that approximately 1,000 minors were waiting for the results of their age determination on the Canary Islands, in some cases for over a year.[1434](#)

Indeed, the UN Committee on the Rights of the Child [found](#) that Spain had violated several articles of the Convention on the Rights of the Child in the age assessment process for a Gambian child who arrived to the Canary islands by boat. The Committee also [found](#) several violations in the age assessment process and the subsequent treatment of a girl from Cameroon fleeing domestic violence.

In June 2020, the Swedish government commissioned an independent inquiry to examine the method used by the National Board of Forensic Medicine for the medical age assessment in the asylum process.[1435](#) The inquiry's interim report was published in October 2021 (SOU 2021:84). It contains, for example, the current underlying scientific basis for the method and a description of how the board's statements have developed over time. The inquiry's final report will include a research study and is expected to be published in 2024.[1436](#)

The Constitutional Court in Czechia [concluded](#) that an applicant's constitutional rights were violated when the medical examination for an age assessment was undertaken in the absence of an interpreter and without the supervision of the child protection services. The flaws in the process led to the applicant being treated and detained as an adult.

The Court of the Hague [reiterated](#) case law that information from another Member State showing that the applicant was registered as an adult was sufficient to consider him an adult also in the Netherlands.
