

## 3.1.1. Economic situation

According to International Monetary Fund's (IMF) estimates for 2024, Sudan is projecting a negative 20.3 % for its Gross Domestic Product (GDP) and an inflation rate of 242.2 %.[538](#)

According to the Finance Minister of Sudan, due to the armed conflict, state revenue fell over 80 %.[539](#) The GDP per capita is 606 USD dollars[540](#) and since the start of the conflict, the currency has depreciated over 300 %.[541](#)

A report on the socioeconomic impact of the conflict on urban households produced by the International Food Policy Research Institute (IFPRI) and the United Nations Development Programme (UNDP),[542](#) indicated that the conflict has 'led to a significant deterioration of economic activity'.[543](#) Armed actions in the context of the current conflict have damaged the infrastructure, including roads and supply chains, impacting Sudan's ability to conduct foreign trade and exports.[544](#) Trade with neighbouring countries such as Chad and Libya has slumped 'dramatically'.[545](#)

The banking system is facing a liquidity crisis.[546](#) Sources indicated that banking operations, most of them based in Khartoum, have been suspended for the most part due to insecurity, power outages, and looting.[547](#) According to the International Rescue Committee (IRC), '[b]lockages in banking transactions, the lack of liquidity and transportation disruptions are contributing to a rise in basic food prices'.[548](#) A human rights analyst indicated that:

'since there is no reliable banking system, people use mobile banking, but that also depends on the diaspora and the capacity to send money. In Port Sudan, for example, Western Union works, but that depends on the access to internet. In areas in central Sudan, for example, there is no internet, and using Starlink is very risky because the RSF controls communications in that area, and those who have family abroad are exposed to kidnapping from the RSF if their communications via Starlink get hacked by the RSF. Some cases of kidnappings have taken place after communicating through Starlink and the RSF gets knowledge of that information'.[549](#)

According to the IFPRI and UNDP survey, about 24 % of households reported receiving assistance, including from family members and other individuals (14.6 %), international humanitarian organisations (4.6 %), domestic humanitarian organisation (1.6 %), and national government agencies (1 %).[550](#)

IFPRI and UNDP report indicated that 69.9 % of urban households are headed by women, and that out of that number, the following statistics are provided:

- marital status: married (41.6 %), widowed (22.5 %), single (19.1 %), and separated (16.8 %);
- education: 'high' (61.8 %), 'medium' (27.2 %), and 'low' (11 %);
- employment status: no employment/no income (36.4 %), self-employed (28.9 %), full-time worker (19.1 %), and part-time worker (10.4 %).[551](#)

- [542](#)

The report is based on a survey of 3 000 households that took place between 24 May 2024 and July 2024. The survey was conducted by phone; however, the authors caution that '[i]n Sudan, where mobile phone penetration is not universal, phone surveys inherently exclude households without access to cell phones, which are often the poorest and most marginalized. This exclusion is likely exacerbated during the current crisis, as infrastructure damage and economic instability may further limit access to functioning mobile networks and charged devices. This potential sampling bias significantly affects the generalizability of findings, particularly for indicators that are closely tied to socioeconomic status'.
