

3.1.1. Infrastructure

3.1.1. Infrastructure

Nigeria is a regional leader in critical infrastructure.⁹⁰⁷ Investment for the development and modernisation of roads, railways, ports, airports, electrification infrastructure, pipelines, and dams has been increasing.⁹⁰⁸ The country, however, presents major infrastructure gaps,⁹⁰⁹ most notably in electricity, transportation,⁹¹⁰ and manufacturing.⁹¹¹ The lack of oil refineries in the country leads to regular fuel shortages.⁹¹² Additionally, the Nigerian oil industry is ‘inefficient and costly’, and the domestic oil price per barrel is the second highest among oil-producing countries, after Iran.⁹¹³ Government-owned refineries reportedly operate at 5 to 25 % annual capacity.⁹¹⁴

In 2023, the electricity grid covered 61 % of the population,⁹¹⁵ and 80 % of those connected could access electricity for a maximum of six hours per day.⁹¹⁶ The electrification of urban and rural areas is 89 % and 27 %, respectively.⁹¹⁷ A survey by Nigeria’s National Bureau of Statistics (NBS) on household welfare, income activities, and socio-economic outcomes,⁹¹⁸ indicated that access to electricity is higher in urban areas (82.2 % of households) than in rural areas (40.4 %).⁹¹⁹ The same source indicated that Nigerian households experience in average 6.7 blackouts per week.⁹²⁰

The World Bank indicated in December 2024 that 80 % of Nigeria’s road network was in ‘poor condition’ due to insufficient funding and weather events, such as high temperatures and rainfalls that damage the roads.⁹²¹ According to the Ministry of State for Works, insecurity is the major obstacle hindering road construction.⁹²² Large parts of Nigeria remain poorly connected to major economic centres, and these centres are not well integrated to each other.⁹²³ Additionally, fees at the inter-state level and roadblocks hinder the ability to move cargo within the country.⁹²⁴

Nigeria’s railway network has about 4 332 track kilometres, most of it in disrepair due to vandalism and conversion of some stretches of the network into farms and residential buildings.⁹²⁵ Daily Trust reported that the Nigerian railway network runs diagonally from the South West (Lagos) to North East (Nguru), and from the South South (Port Harcourt) through Kafanchan to the North East (Maiduguri).⁹²⁶ Urban rapid transit railway projects were inaugurated in Lagos and Abuja in 2023 and 2024, respectively.⁹²⁷ The 157-kilometre Lagos-Ibadan railway was completed in 2021, and the 186-kilometre Abuja-Kaduna railway, in 2016.⁹²⁸

The Federal Airports Authority of Nigeria (FAAN) website indicated that there are five international and 11 domestic airports⁹²⁹ in the country.⁹³⁰ For additional information see [3.9. Mobility and freedom of movement](#).

Nigeria has 28 seaports, with two of them considered ‘large’, and 23 of the ports have oil terminals.⁹³¹ In 2023, Nigeria ranked 25th among Sub-Saharan African countries for artificial intelligence (AI) preparedness.⁹³² As Nigeria’s economic hub, Lagos faces significant energy challenges, including an electricity deficit, high energy costs, reliance on fossil fuels, and infrastructure vulnerabilities.⁹³³
